A Message from:

Dr. Chowdhury, Cataract Surgeon and Chief Medical Officer (Ophthalmology):

When a person is blind due to cataract, that person's life is not enjoyable as like other normal person. He or she then becomes dependable for everything to some one else, even to get a grant that person seeks help from his surroundings.

You close your eye ...you will see nothing ...your whole world is dark....you need light...and if this blindness is preventable and can be cured by doing a 45 minutes cataract surgery with an implant....then go for it...come to Stanger hospital eye care centre ...we will help you
