	What to check: Capture thermal images of all electrical panels and other high-load connection points										
	such drivers, disconnects, follows that circuit and examine associated branches and loads										
	Check panels and other connections with the covers off. (Ideally, you chard check element desires	4000									
	when they are fully warmed up and at steady state conditions with at										
	least 40% of the typical boat. Inal way, measurements can be properly evaluated and compared to normal onerwise conditions!										
	Check the conductor rating and the actual load to determine which is the case										
	Check current balance and loading on each phase										
	Check the protection switchgear for voltage drops (In general, voltage drop should within 10% of the
