FROM THE NURSING MANAGER'S OFFICE

2010 has finally come, has been anticipated because the soccer world cup is coming to South Africa. 2010 has been dedicated to the nurse, the President says "it is the year of action" as nurses we need to recommit ourselves to service of humanity as carers and Nurturers. We need to support management to deliver to the vision of the Department of Health .

Service delivery revolves around the nurse lets change our attitudes towards care and service delivery and do what we can achieve seamless service delivery for all departments. Shortage of staff is still a sore one we working in the rural areas are still hardest hit by the moratorium on the filling of posts and lack of other resources due to budgetary constraints.
Nurses are predominantly female, as mothers we are experts in the economic utilization of resources like what we do at home during bad time; lets try to economize and educate the young ones that the sky is not always blue.

Lets wait and hope that after the World Cup the situation with our resources will return to normal, wait with hope enjoy the tournament, organize ourselves be available for the fan parks and the disasters that may happen during the tournament in our areas. Revive the spirit of volunteerism; thus showing the world that South Africa belongs to us, we are prepared to serve, as we care because we belong. Batho Pele further more it is important that one knows s status of HIV. Lets visit the nerve centre for testing remember everybody is HIV+ except you if you know your status. Lets protect our girls, children from trafficking they are special and victims of this practice. Educate them and protect them from unscrupulous people.
In closing, join Khanya Africa an initiative for volunteerism and volunteer to take health care to our people.
Soccer unites us all, i.e. paramedics, doctors, nurses and police including correctional services of which it will indicate humanity.

Members of the National Council of Provinces listening to the presentation

These news came officially to Hlabisa Hospital on the 17th of March 2010 with the National Revitilisation team led by Dr S.M. Zungu the Head of Department. It wasn't the good news at all as Hlabisa Hospital infrastructure is in a terrible condition as it was built long time ago.

Buildings its self are in a terrible condition more especially OPD and Pharmacy which are leaking water from the wall. Plumbing pipes were built inside the walls, when the patient's toilets are blocked, the whole damage comes inside the OPD which forces patients to wait outside until the cleaning is finished.

The National Revitilisation team came on the midday and announced this news. After that meeting, rounds were done around the nurses home and doctors residence which was constructed as Phase 1 of the hospital under Revitalization Presidential Project. Other renovated wards renovated were also visited and Operational Managers explained their activities-wards then to OPD and Pharmacy was also visited. They had a chance of talking to the community/ patients who were waiting in OPD.
