

NATIONAL RESEARCH DALABASE

Need access approval?

Until now there has been no uniform system of co-ordinating applications to conduct research in public health facilities in the country.

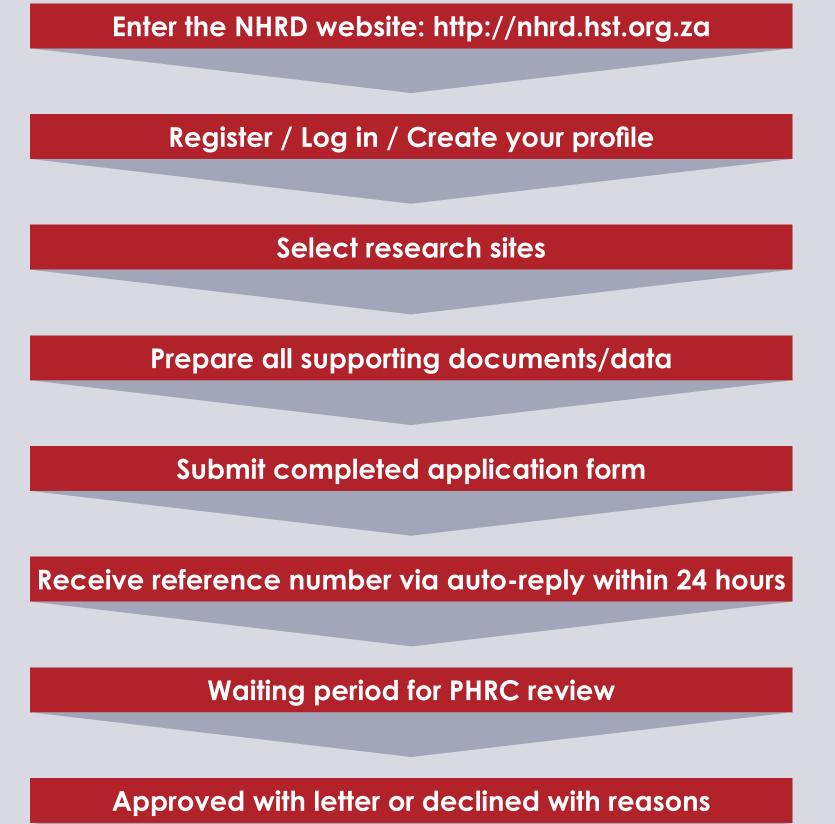

Health Systems Trust, in collaboration with the National Department of Health (ND0H), has created the **National** Health Research Database (NHRD) to facilitate the management of public health authorities' research activities in accordance with the National Health Act (61 of 2003).

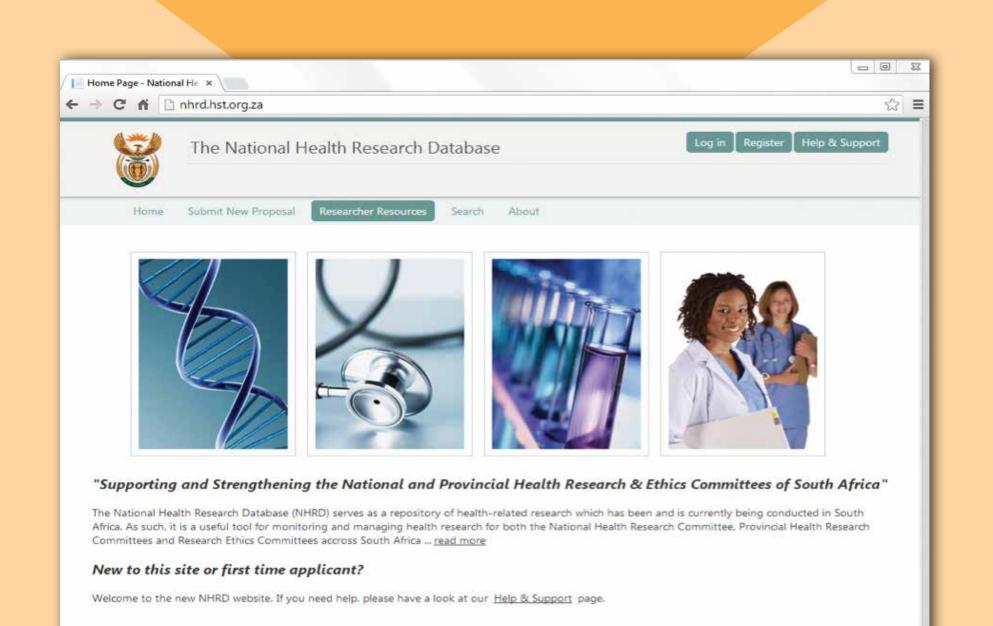

The NHRD stores all information on South African health facility-based research outputs and enables a fast, efficient research application process.

Support to users is offered by a dedicated NHRD Helpdesk, accessible via email at nhrdsupport@hst.org.za.

How the NHRD research application monitoring and tracking system works

- Researchers have 24/7 access to create log-in accounts, submit their applications and upload documents in a standardised manner applicable to all provinces.
- Researchers receive an immediate automated response and can verify the status of their application using a unique reference number.
- Committee members receive online applications for access approval to conduct research in health facilities.
- An internal review takes place according to the particular province's approval process.
- Access approval is granted or declined with an official email response to the researcher's NHRD profile.
